

Wear and Care leaflet for Safety Helmets

All Centurion safety helmets are professionally designed, manufactured and tested to the highest standards. All helmets comply with the current European Standard (EN397) for industrial safety helmets. A safety helmet can save your life, it should therefore be treated with the care and respect that any lifesaving aid deserves.

Fitting

Every safety helmet should be adjusted so that it is a snug fit to each individual's head. A too tightly fitting helmet will cause discomfort to the wearer, whereas one that fits too loosely may not provide adequate protection in the event of an accident occurring.

Marking

The material used for the helmet shell has been specifically chosen for its shock absorption and impact properties and for its durability. It can, however, be sensitive to chemical attack. For this reason, it is recommended that helmets are not painted, should not be marked with felt tip pens and do not have decals or labels applied*. Centurion helmets that have been pad printed by us use thoroughly researched compounds which have no long-term effect on the properties of the helmet.

* Certain labels have adhesive that do not affect the protective properties of the shell material. A label that is approved for use by us is Fasson Vellum Extra/R5000/BG40 by Avery Dennison. Alternatively, if you are not sure of the label/adhesive type or use different labels, we offer a free of charge service to test the adhesive of labels in our laboratory to check their suitability on our helmets.

Cleaning

Should a safety helmet require cleaning, we would advise that it is cleaned with warm soapy water and a soft cloth. Any helmet which does not come clean with this treatment should be replaced. Do not attempt to clean a helmet with solvents or abrasives.

Storage

The helmet can be stored in its original transport cartons at storage temperature (0°C to + 30°C) in the dark, for up to 5 years from date of manufacture (without effecting the 'in-use' lifetime). Exceeding 5 years' storage will reduce its in-use lifetime accordingly.

Storage in direct sunlight, extremes of temperature and in a fashion that is liable to distort the shell is not recommended. This will reduce the helmet lifetime.

Lifetime of a helmet

The helmet has an in-use life of up to 5 years from the date of issue to the user (i.e. removal from storage). It is recommended that after 5 years use the helmet is destroyed. Excessive wear & tear and use in extreme environments can considerably reduce the life span of the product.

An in-use life statement from a manufacturer is purely a recommendation for guidance and good practice. However, Centurion has done substantial testing on helmets over the years, researching the effects of the helmets raw materials, including its UV stabilising properties and are very confident in quoting the 5-year period.

The date of manufacture is moulded into the helmet – the year is detailed i.e. 13 = 2013, along with four quarter segments, denoting the quarter of manufacture within that given year.

Depending on the helmet type, the date of manufacture is engraved in a different location:

Spectrum:

Reflex/Reflex Plus:

Other Centurion helmets:

Date of issue

Centurion also supply a label inside the helmet which includes the 'date of issue' for the wearer or employer to complete.

Note

Any helmet that has been used in anger should be discarded and replaced. Any helmet that has deep scratches, or has been cut, should also be discarded and replaced.

Remember

YOU ONLY HAVE ONE HEAD, BUT YOU CAN HAVE AS MANY SAFETY HELMETS AS YOU LIKE FROM CENTURION SAFETY PRODUCTS.
